

Name: Nur izzanisha Binti Md Noor

Matric Number: A210986

App Name: Trash Tracker

Sustainable Development Goal 11: Sustainable Cities and Communities

Problem statement:

Waste management in residential areas remains inefficient as many residents frequently forget waste collection schedules and do not have a reliable system to track them. Without a simple and accessible method to monitor collection times, residents may miss scheduled pickups or dispose of waste improperly.

Why it matters (impact):

This issue contributes to the accumulation of uncollected waste, which can lead to poor hygiene, unpleasant living conditions, and potential health risks within the community. Furthermore, unmanaged waste can pollute the environment, attract pests, and negatively affect the overall quality of life, making it an important issue to address in sustainable urban development.

Proposed solution:

To address this problem, a mobile application called **Trash Tracker App** is developed to assist users in monitoring waste collection schedules more effectively. The application provides features such as reminders, real-time schedule display, and reporting tools for waste-related issues. By improving awareness and accessibility, the app supports better waste management practices and contributes to achieving Sustainable Development Goal 11: Sustainable Cities and Communities.
